UDACITY

Student Project Review FAQ

All of my projects met specifications! When will I receive my certificate?

Once you have completed all required projects, you will be prompted to start your graduation process. This includes verifying your identity and completing a final reflection survey. Some students may or may not be asked to participate in an exit interview. If you have additional questions, please email graduation-support@udacity.com.

When will my project be reviewed?

Project reviews are often completed in about 24 hours, something that Udacity strives for! As noted in your student handbook, "Due to the high volume of submissions and the time it may take your project reviewer to give personalized feedback, the turnaround period for project evaluations may be up to 1 week." Your student handbook can be found in your "Resources" section in your student portal.

I forgot a file or need to make a change to my project! How do I cancel a submission?

You can view instructions on how to cancel a project here. If your project is already being reviewed you will not have the option to cancel it.

How do I zip my project to upload it for review?

We have instructions on how to zip a file here.

I have a question about my review!

Contact review-support@udacity.com with a link to the review and your questions.

How can I ask a reviewer a question about my feedback?

Contact review-support@udacity.com with a link to the review and your questions.

My project didn't receive a status of "Exceeds Specifications" - why is that?

Exceeds Specifications is no longer used for Project Reviews. All submissions will receive a response of either "Meets Specifications" or "Requires Changes". You can find more info here.

I'm trying to submit my project and get the following error: "Your zip file contains more than 1,000 files. Please re-submit a smaller zip file."

Android: Did you try cleaning your project? Often, the 1000 file limit error occurs because of the files that are generated in the build folder of your app at the time of building your project. These files can be generated by the code reviewers, so feel free to remove them. Here's a document that explains how to clean your project on Android Studio before you generate a zip or push the application on Github! If you have additional issues please contact review-support@udacity.com.

FEND: Have you checked to see if you included the node_modules folder? This folder can include multiple files that can cause this error. You can find more information regarding how to clean up the node_modules from your project here. If you have additional issues please contact review-support@udacity.com.

iOS: Sometimes Xcode can create a hidden directory structure in the project folder. Before doing anything we highly recommend you backup your entire project! Once it has been backed up you'll need to find the hidden directory and remove it. This should now allow you to upload your project. If you have additional issues please contact review-support@udacity.com.

I'm trying to submit my project and get the following error: "You can't resubmit because you already have a submission outstanding."

This error appears when you already have a submission awaiting review for the project in the system. If you believe you have seen this in error please contact review-support@udacity.com.

I'm trying to submit my project and get an error mentioning I have the wrong file type.

This error appears when you submit a file type that is not supported for the project. When submitting you should see under the option "Upload File" a list of the file types we accept for the project.

I'm trying to resubmit my project but received an error stating that I can't resubmit because I've already passed this project. How do I resubmit?

We think of projects as a way for the student to demonstrate mastery of a certain set of skills. Once a project has met specifications, we expect the student to want to move on to the next set of skills. So there currently is no way to resubmit a project. You can see the result of your project submission at the top of the "Project Review" tab on the review of your project.

How do I become a reviewer?

Go to our application page for more information.
